1 Identify Hidden Compliance Gaps Before They Become Fines

STEP 1: IDENTIFY HIDDEN COMPLIANCE GAPS BEFORE THEY BECOME FINES

Most medical practices don't realize they are exposed to HIPAA violations every single day. Unsecured workstations, outdated software, improper data handling, or misconfigured email services.

A full compliance and security assessment uncovers vulnerabilities such as:

- Improper PHI access permissions
- Missing encryption on devices storing patient data
- Unsupported Windows or macOS versions
- Misconfigured Microsoft 365 / Google Workspace security
- Lack of audit logging or breach monitoring
- Weak or outdated passwords and MFA policies

By identifying these issues early, practices prevent unexpected $10,000–$50,000 fines, protect patient trust, and build a safer technology foundation.

2 Implement Automated Safeguards That Run in the Background

STEP 2: IMPLEMENT AUTOMATED SAFEGUARDS THAT RUN IN THE BACKGROUND

Once compliance gaps are identified, we deploy industry-standard protections that quietly keep the office secure without disrupting workflow.

This includes:

- Fully managed HIPAA-compliant backups
- Email security with SPF, DKIM, DMARC, and phishing protection
- Endpoint protection with real-time monitoring
- Encrypted laptops/desktops (BitLocker/FileVault)
- Secure Wi-Fi segmentation for staff, guests, and IoT devices
- Automated compliance reporting
- Mobile device and workstation policy enforcement via Intune or MDM

These systems enforce HIPAA safeguards automatically so the practice doesn't have to rely on staff remembering daily IT tasks.

3 Ongoing Monitoring, Support & Compliance Documentation

STEP 3: ONGOING MONITORING, SUPPORT & COMPLIANCE DOCUMENTATION

Compliance isn't a one-time task—it's a living process.

We provide:

- 24/7 system monitoring
- Monthly or quarterly compliance reports
- Automatic policy updates when regulations change
- Staff training and phishing simulations
- Fast helpdesk support for all technology issues
- Annual risk assessments (HIPAA Security Rule requirement)
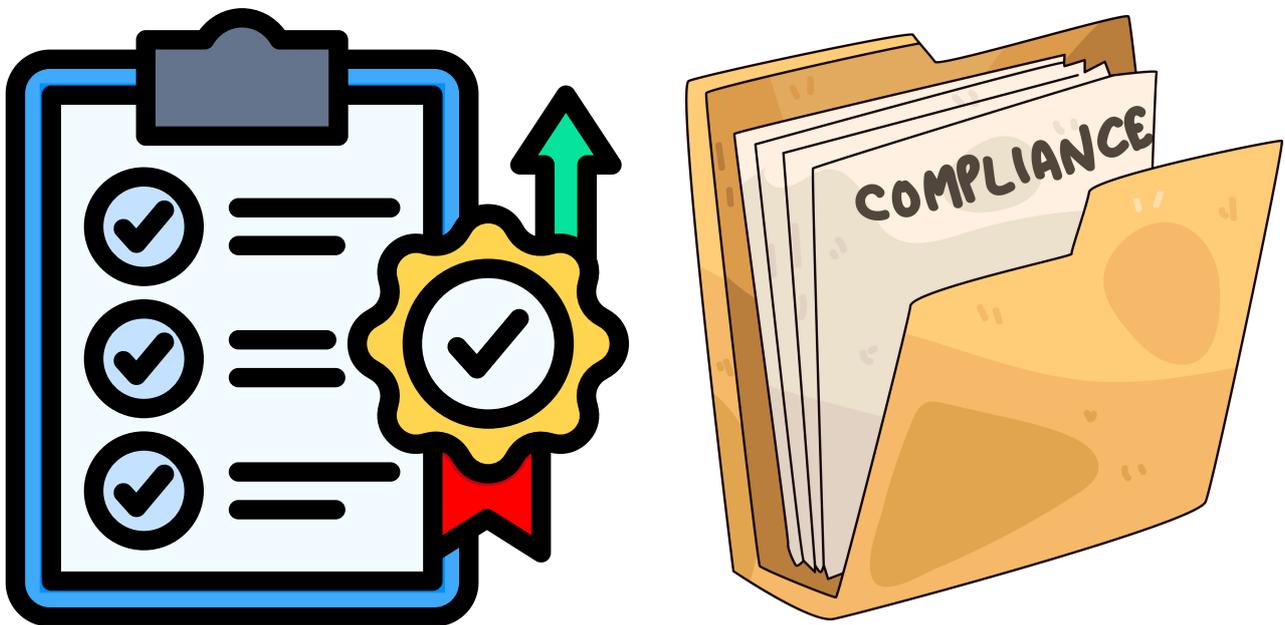

This ensures the practice stays compliant every day of the year, avoids downtime, and prevents costly business interruptions.
